

Software developer internship Global Campus

Looking for someone who:

- Is following a HBO or WO study related to ICT
- Is capable of working independently and asks for help when something is unclear
- Likes to dive into the world of AI transformer models, NLP
- Has speaking and writing skills in English

What we offer:

- Fulltime internship (3 – 6 months)
- A good atmosphere and nice colleagues
- Everyday lunch
- Internship fee of €300,- per month

At Global Campus we make it easy to find academic expertise. Using state of the art AI-models to analyze academic publications, we help our customers to quickly find the right expertise. This is used by recruiters, funding agencies (to find people that can review applications) and by researchers in universities to scout for new collaboration partners and for new literature.

Global Campus is created by IDfuse, with currently a team of 6 of which 4 developers and 2 customer focused roles. Global Campus is the latest platform that we created at IDfuse and is live since early 2023. We value good mentorship, so there are regular check ins with your colleagues in the company to make sure everything is going according to plan, but also for you to ask questions.

Development internship

In the Global Campus platform we make use of Transformer models to do the matching between the users input text and the corpus of academic output. We use Vespa as a vector database, neo4j for network visualizations and many other tools to make Global Campus work. You don't need to have experience with these tools, we are happy to teach you. But if you do it will obviously be helpful for a smooth start of the internship. The same with languages like Python, Java, PHP, SQL, PERL, Ruest, VueJS. Experience is useful but not necessary. We are happy to learn from your experiences in specific languages during an introduction meeting!
